2009 FENCESCAPE FENCING

FENCESCAPE.COM

every fence is a good neighbor fence

A fence is the most visible extension of a home. And with FenceScape you don't have to sacrifice beauty to get quality. You get the best of both worlds. FenceScape provides the look and feel of wood with the low-maintenance benefits you expect from composites. There's no painting, staining or sealing, and FenceScape won't split, rot, warp, crack, splinter or suffer termite damage. Available in a rich, warm, beautiful Mountain Cedar color, FenceScape composite fencing will look new, year after year.

Components

Fence Boards

1/2" x 5-1/2" or 1/2" x 3-1/2"

FenceScape fence boards are 30%-40% lighter than solid composite boards. Dog-eared boards are available in 6' lengths. Square cut boards are available in 6', 8' or 10' lengths.

Posts

5-1/4" x 5-1/4"

FenceScape's self-supporting post is serrated to match the rail and has a 1/2" thick wall. It is available in 7' or 9' lengths. Although not required, the posts can slide over a new or existing 4 x 4 or can be used in conjunction with a steel post.

Post Covers

4-1/4" x 4-1/4"

FenceScape post covers are available in 7' or 9' lengths and have a smooth surface. The post covers must slide over an existing 4 x 4 or steel post.

Post Caps

Decorative and internal post caps are available for use with the 5-1/4" x 5-1/4" post. Flat top post caps can be used with post covers.

Rail Brackets

FenceScape's rail bracket provides an alternative to toe-screwing the rails between the posts, eliminating the need to pre-drill. Installation is faster and easier than ever.

Color-Matched Fasteners

#8 x 1-1/4" stainless steel screws are available for attaching rail brackets and fence boards. Fence boards can also be attached with our 1-3/4" hot dipped ring shank nails.

Steel Reinforced Rail

1-9/16" x 3" x 8'

FenceScape's rail contains a honeycomb of steel that helps prevent sag experienced over time with temperature changes or long-term load.

Named #1 new product by Fencepost Magazine, the official publication of the American Fence Association.

DESIGN VERSATILITY

ignite your imagination

With FenceScape, you can customize any outdoor living space. FenceScape components provide the same design flexibility and workability as traditional wood, allowing you to express your style and create a distinct design. Customized gates and styles such as privacy, picket, shadowbox and other unique installations are easily achieved. And because FenceScape easily follows the contour of the ground, it offers complete privacy and security.

Our unique manufacturing process allows us to produce wood patterns that are consistent in quality, but vary slightly in appearance. This ensures that no two fences are exactly alike and it minimizes repetitive patterns.

Developed by TimberTech, the company that brought you the highest quality, most innovating decking and railing solutions on the market, FenceScape is backed by a name you can trust. So add privacy to your yard, relax around the pool, grill out with family and friends or beautify your space with FenceScape composite fencing.

- Color: Mountain Cedar
- Made from reclaimed wood fiber and high-density polyethylene
- Contains UV-inhibiting pigments that help minimize fade
- Mildew resistant
- Spans 8' center-to-center of posts
- 25-year limited warranty for residential applications

SUSTAINABLE LIVING

a more sustainable world – one piece at a time

FenceScape has the perfect balance of quality and sustainability. Our products are an attractive, low-maintenance alternative to wood and a one-time purchase for most homeowners. And since FenceScape will not splinter or warp and does not require any staining or sealing, the wasteful cycle of repair and replacement typical of wood is dramatically reduced.

Below are a few environmental initiatives that TimberTech practices corporately.

TimberTech creates products with the environment in mind:

- No trees are cut down for the purpose of making TimberTech products.
- Our wood flour is recycled from the woodworking industry and keeps more than 100 million pounds of wood waste out of landfills each year.
- More than 28 million pounds of scrap product is reclaimed and put back into our manufacturing process each year, which saves even more wood and plastic waste from reaching landfills.

TimberTech strives to act responsibly in our daily operations:

- Our product brochures are printed on recycled paper using soy-based ink.
- Product cartons are made with 25%-30% recycled material and are 100% recyclable.
- The water in our manufacturing facilities is recycled using a closed loop water system. Reusing the water in our plants saves over 140,000 gallons every day.
- We use natural light and energy-efficient bulbs to save energy.
- We ship many products by railcar. One railcar carries a load equivalent to four tractor-trailer trucks, which in turn keeps about 500 trucks off the road each year.
- We recycle our skids and corrugate.

TimberTech is a proud member of the U.S. Green Building Council. This coalition of leaders from the building industry works to transform the way communities are built and strives to create a socially responsible environment that improves quality of life.
